

Day 1 PM: Type-along with Brian

Day 1 PM, Agenda – Follow-along demos

- The Sticky Note protocol
- Technical Validation
 - Making a markdown document
 - Generating a PDF report
- Getting started with corpus analysis
 - Loading data
 - Why wordclouds should be considered harmful
 - **Discussion:** Why we visualise data
 - Making a wordcloud
 - **Discussion:** What data do you need for your research this week?
- After-school exploration
 - Getting help from Large Language Models
 - How to ask the right questions

Technical Validation

Hello World (in Markdown and knitted as a report)

- "Hello World" is traditionally the first program run in a new language/on a new install to make sure everything "works."
- Goal: Make an .rmd (R markdown file) which executes a small "program" (script) to write "hello world"
- File > New File > R Markdown... (yes to installs if missing)

Run current chunk

Add hello world

add

```
""{r}
```

```
print("Hello World")
```

```
""
```

to the top of the document and hit ctrl-enter (or command-enter)

Preview, then Publish

Save, Run All, then Knit to word or PDF

What is Markdown?

<https://www.markdownguide.org/getting-started/>

"Markdown is a lightweight markup language that you can use to add formatting elements to plaintext text documents. Created by John Gruber in 2004, Markdown is now one of the world's most popular markup languages.

Using Markdown is different than using a WYSIWYG editor. In an application like Microsoft Word, you click buttons to format words and phrases, and the changes are visible immediately. Markdown isn't like that. When you create a Markdown-formatted file, you add Markdown syntax to the text to indicate which words and phrases should look different.

For example, to denote a heading, you add a number sign before it (e.g., # Heading One). Or to make a phrase bold, you add two asterisks before and after it (e.g., **this text is bold**). It may take a while to get used to seeing Markdown syntax in your text, especially if you're accustomed to WYSIWYG applications. "

Getting Started with Corpus Analysis

Code along

We are now going to do a live code-along to generate a wordcloud.

Before we end, sticky note feedback

- On the green sticky note, write one thing that went well this session.
- On the red sticky note, write one thing that we can improve on, tomorrow.
